Product Data Sheet

Western blot analysis of TGFBI expression in A549 (A) whole cell lysates. (Predicted band size: 74 kD; Observed band size: 68 kD)

Immunohistochemical analysis of TGFBI staining in human squamous cell carcinoma formalin fixed paraffin embedded tissue section. The section was pre-treated using heat mediated antigen retrieval with sodium citrate buffer (pH 6.0). The section was then incubated with the antibody at room temperature and detected using an HRP conjugated compact polymer system. Tyramide-AF488 (green) was used as the chromogen. The section was then counterstained with DAPI (blue).
