

## ECL Detection Reagent (Picogram Level)

Catalog #	Source	Reactivity	Applications
CRG1026		N/A	WB
<b>Description</b>	ECL Detection Reagent (Picogram Level) is designed for the detection low picogram level proteins on all routine Western blotting		
<b>Form</b>	Liquid		
<b>Components</b>	ECL Detection Reagent A ECL Detection Reagent B		
<b>Application</b>	ECL Detection Reagent uses horseradish peroxidase (HRP) conjugated anti-mouse and anti-rabbit antibodies for luminol-based detection of Western blots. Blots probed with mouse or rabbit primary antibodies are incubated with HRP-conjugated secondary antibodies. Addition of ECL Detection Reagent results in a chemiluminescent signal that can be captured on film or detected with a CCD camera.		
<b>Directions for Use</b>	Mix ECL Detection Reagent A and B at 1:1. Use 0.1 ml mix solution per cm <sup>2</sup> of membrane. For best results prepare mix solution immediately before use. The mix solution is stable for up to 3 hour at room temperature in dark.		
<b>Storage/Stability</b>	Store at 4°C for one year. Do not freeze.
