## **KBTBD7 siRNA (Human)**

Reactivity	Applications		
tic H	RNAi		
on siRNA to inhibit KBTBD7 expression using RNA interference			
KBTBD7 siRNA (Human) is a target-specific 19-23 nt siRNA oligo duplexe		o duplexes designed	
to knock down gene expression.			
Lyophilized powder			
KBTBD7			
Kelch repeat and BTB domain-containing protein 7			
84078 (Human)			
Q8WVZ9 (Human)			
> 97%			
Oligonucleotide synthesis is monitored base by base through trityl analysis to ensure			
appropriate coupling efficiency. The oligo is subsequently purified by affinity-solid			
phase extraction. The annealed RNA duplex is further analyzed by mass			
spectrometry to verify the exact composition of the duplex. Each lot is compared to			
the previous lot by mass spectrometry	to ensure maximum lo	t-to-lot consistency.	
onents We offers pre-designed sets of 3 different target-specific siRNA oligo duplexes of			
human KBTBD7 gene. Each vial contains 5 nmol of lyophilized siRNA. The duplexes			
can be transfected individually or pool	d together to achieve	knockdown of the	
target gene, which is most commonly assessed by qPCR or western blot.

## **Product Data Sheet**

DEPC Water	1 ml x 1	1 ml x 2
Negative Control	2.5 nmol x 1	2.5 nmol x 2
KBTBD7 siRNA (Human) - C	5 nmol x 1	5 nmol x 2

**Directions for Use** 

We recommends transfection with 10 nM - 100 nM siRNA 48 to 72 hours prior to cell lysis. Before resuspending, briefly centrifuge the tube to ensure the lyophilized siRNA is at the bottom of the tube. Resuspend the siRNA oligos to an appropriate concentration with DEPC water. For example, resuspend one tube of 5 nmol siRNA oligo in 250  $\mu$ l of DEPC water to get a final concentration of 20  $\mu$ M.

Final volume	Final concentration	siRNA (20 μM)	Lipofectamin
