## WDR31 siRNA (Human)

e Reactivity	Applications				
etic H	RNAi				
scription siRNA to inhibit WDR31 expression using RNA interference					
WDR31 siRNA (Human) is a target-	specific 19-23 nt siRNA oli	go duplexes designed to			
knock down gene expression.					
Lyophilized powder					
WDR31					
Iternative Names WD repeat-containing protein 31					
intrez Gene 114987 (Human)					
Q8NA23 (Human)					
> 97%					
Oligonucleotide synthesis is monitored base by base through trityl analysis to ensure					
appropriate coupling efficiency. The oligo is subsequently purified by affinity-solid phase extraction. The annealed RNA duplex is further analyzed by mass spectrometry to verify the exact composition of the duplex. Each lot is compared to					
			the previous lot by mass spectrom	etry to ensure maximum lo	ot-to-lot consistency.
			Components We offers pre-designed sets of 3 different target-specific siRNA oligo duplexes of		
human WDR31 gene. Each vial contains 5 nmol of lyophilized siRNA. The duplexes					
can be transfected individually or	pooled together to achieve	knockdown of the			
target gene, which is most commonly assessed by qPCR or western blot.

	Negative Control	2.5 nmol x 1	2.5 nmol x 2
-	DEPC Water	1 ml x 1	1 ml x 2

**Directions for Use** 

We recommends transfection with 10 nM - 100 nM siRNA 48 to 72 hours prior to cell lysis. Before resuspending, briefly centrifuge the tube to ensure the lyophilized siRNA is at the bottom of the tube. Resuspend the siRNA oligos to an appropriate concentration with DEPC water. For example, resuspend one tube of 5 nmol siRNA oligo in 250  $\mu$ l of DEPC water to get a final concentration of 20  $\mu$ M.
